UI/FRONT END ENGINEER POSITION

Location: London

Amphora UK Limited is the premier software solution provider for energy trading, logistics and risk management in the global crude oil, refined products and energy derivatives marketplace. Our team includes some of the most experienced software designers, developers and business analysts in the commodities industry today. Since our inception, our main goal has been to provide the trading community with the most robust, user-friendly, enterprise-wide software package available. We continue to launch new products that address customers' needs and adjust to dynamic market demands.

Roles and Responsibilities:

- The Senior engineer will be responsible in owning key design and development responsibilities in the current and future stack engineering of Amphora's core symphony platform/product suite, particularly contributing to the UI /front end development.
- The role will work closely with CTO and the UI /Front end capability lead in developing the next generation UI Frameworks and UI layer of Amphora's strategic architecture.
- The role will also work with rest of technology organisation to improve the SDLC rigor including automated testing, automated build and deployment, design and coding best practices.
- Be a proactive leader in active engagement to resolve issues, collaborate with rest of the development organisation to deliver the technology strategy defined by CTO and the company strategy defined by CEO.
- Exhibit great attention to detail and understanding how to combine aesthetics and usability. Candidate should be passionate about creating great user experiences and always advocate for them, turning conceptual ideas into sketches or wireframes using a visual editor but also love to bring those designs to life on the web using leading technologies like React, Redux.

Experience and Expertise:

- 4-6 years of UI/UX design and/or development experience.
- Must be an expert/advanced developer in React and have worked on at least 2 separate projects that included Redux and a CSS framework.
- Must have a solid understanding of Functional Programming principles.
- Must have experience in Node.JS and supporting build tools such as Webpack.
- Strong communication skills.
- Must have experience with CSS, Java Script, HTML and a broad understanding of JavaScript frameworks.
- Experience in GraphQL, microservices architecture, Java or Kotlin will be a plus.
- Experience in Designing rich, modern web experiences that are accessible, progressive and responsive.
- Ability to convert UI/UX designs into interactive views (using HTML, CSS, Bootstrap/Semantic UI, JavaScript).
- Experience of cross browser compatible coding and modular coding (HTML, CSS templates, JavaScript dependency management).
- Ability to empathize with and understand the needs of our users.

- Understanding of the entire web development process, including design and development.
- Preparing UI design documentation.
- Good knowledge and working experience of Agile Scrum and Software Development Life Cycle.

Requirements:

Bachelors or master's degree in computer science or engineering proficiencies from a reputed engineering or science university.

Benefits:

We value our employees' time and efforts. Our commitment to your success is enhanced by our competitive salary, depending on experience, and an extensive benefits package including paid time off, private medical insurance (that covers standard out-patient therapies, mental care, extra care, extra cancer cover), income protection insurance (which covers 80% of salary if you become unable to work because of illness or injury), enhanced pension contribution and future career growth opportunities. Plus, we work to maintain the best possible environment for our employees, where people can learn and grow with the company. We strive to provide a collaborative, creative environment where each person feels encouraged to contribute to our processes, decisions, planning and culture.

Employment Location:

Amphora UK Limited 3
London Bridge Street
London, SE1 9SG
